

CREST HIRES Summer 2016 Research Project River ice

SIMON KRAATZ

RESEARCH GROUP/THEME III: LAND SURFACE HYDROLOGY

A solid orange horizontal bar at the bottom of the slide.

TOC

A. Introduction to Ice Jams

B. Project

- Mapping of Landsat imagery on Google Earth
- Change detection for traffic cameras (ice vs. no ice)
- Use result of traffic camera algorithm and other data (gauge, temperature, satellite product ...) and explore how they relate to ice cover via model (i.e. GLM, ANN...)

A. River ice jams

A collection of loose, randomly oriented,
needle-shaped ice crystals in water (i.e. slush)

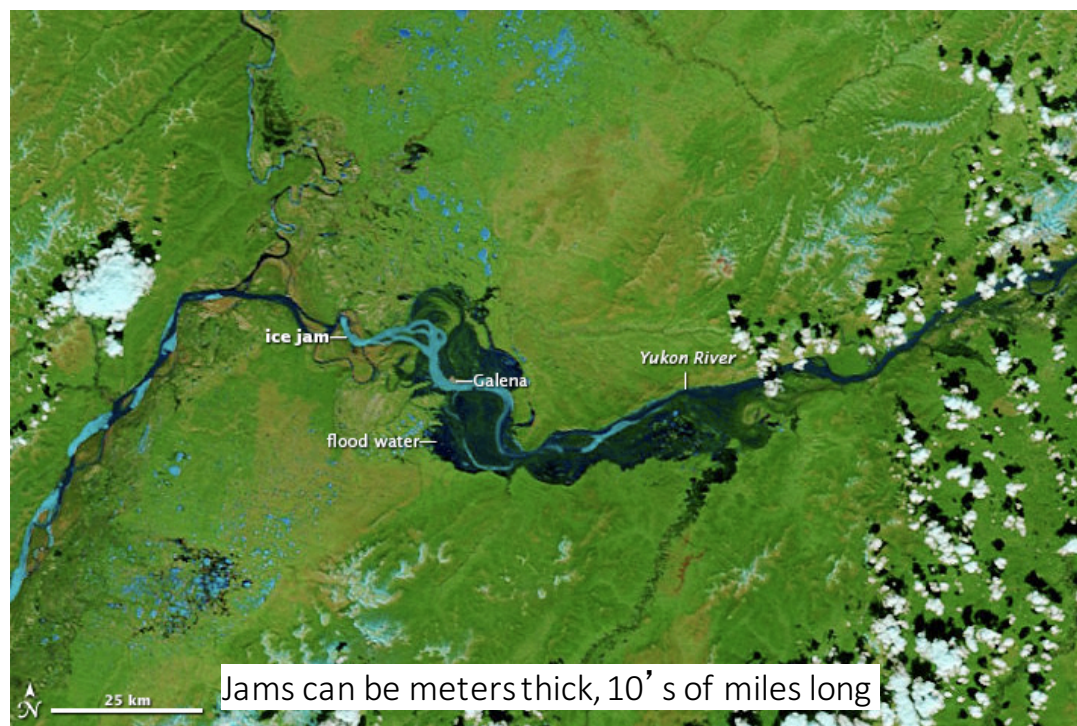

“...a stationary accumulation of ice or frazil that restricts flow”

International Association for Hydraulic Research (IAHR)

A. River ice jams

Jams can be meters thick, 10's of miles long

MODIS image of Yukon River before and after the jam caused flooding. May 2013, NASA EOS.

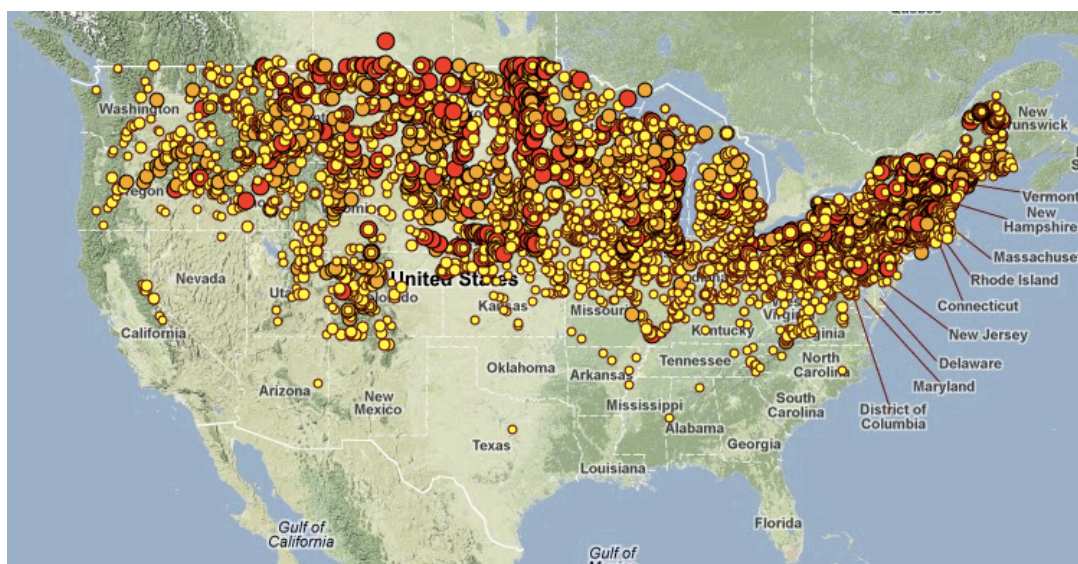

A. River ice jams

Plot of 185 Ice jams for current water year 2015 by state as of today 22-JUN-15

A. River ice jams

A. River ice jams

500 m resolution, MODIS Aqua.

B. Projects

PROJECTS (2)

(1) Model ice cover/jam on Lower Sus. River

- From surface observation only (Temp., Flow)
- Combination of surface with satellite data
 - Time series related to ice cover and ice cover change
- Assess value of satellite data

(2) Observe ice cover on Lower Sus. River

- Change detection for traffic cameras
- Make a 'mask'
- Analyze spectral statistics
- Determine if ice is present

SKILLS

Amongst other things, you will

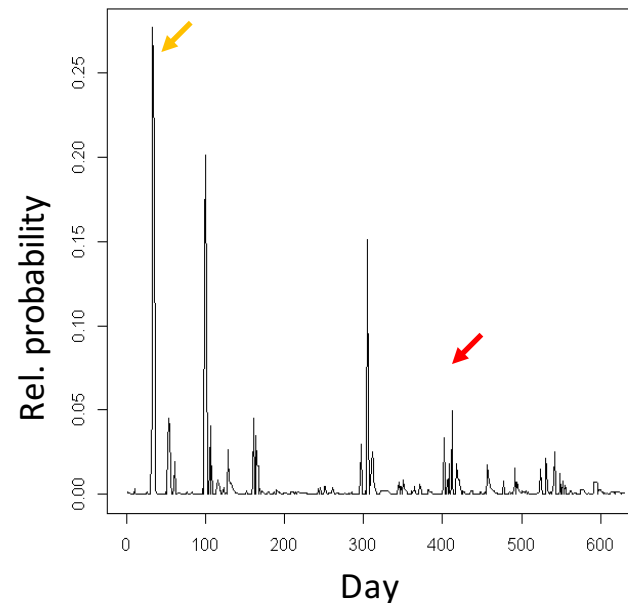

- work with satellite data/images
- create maps in GIS
- develop a model/algorithm
- use software such as Matlab, R, Excel, ENVI/IDL, Python and GIS for analysis and visualization

B. Model ice cover/jams

Past model results using CRIOS ice cover, ice jams

Jam probability (ground data only)

Jam probability (ground + sat data)

-  false alarm
-  no detection

B. Visualize ice jam data in GIS

 **US Army Corps of Engineers**
